

**Hewlett Packard**  
Enterprise

# The Future is Now

Chris Powers  
Hewlett Packard Enterprise - Vice President HPE  
Storage

September 2017

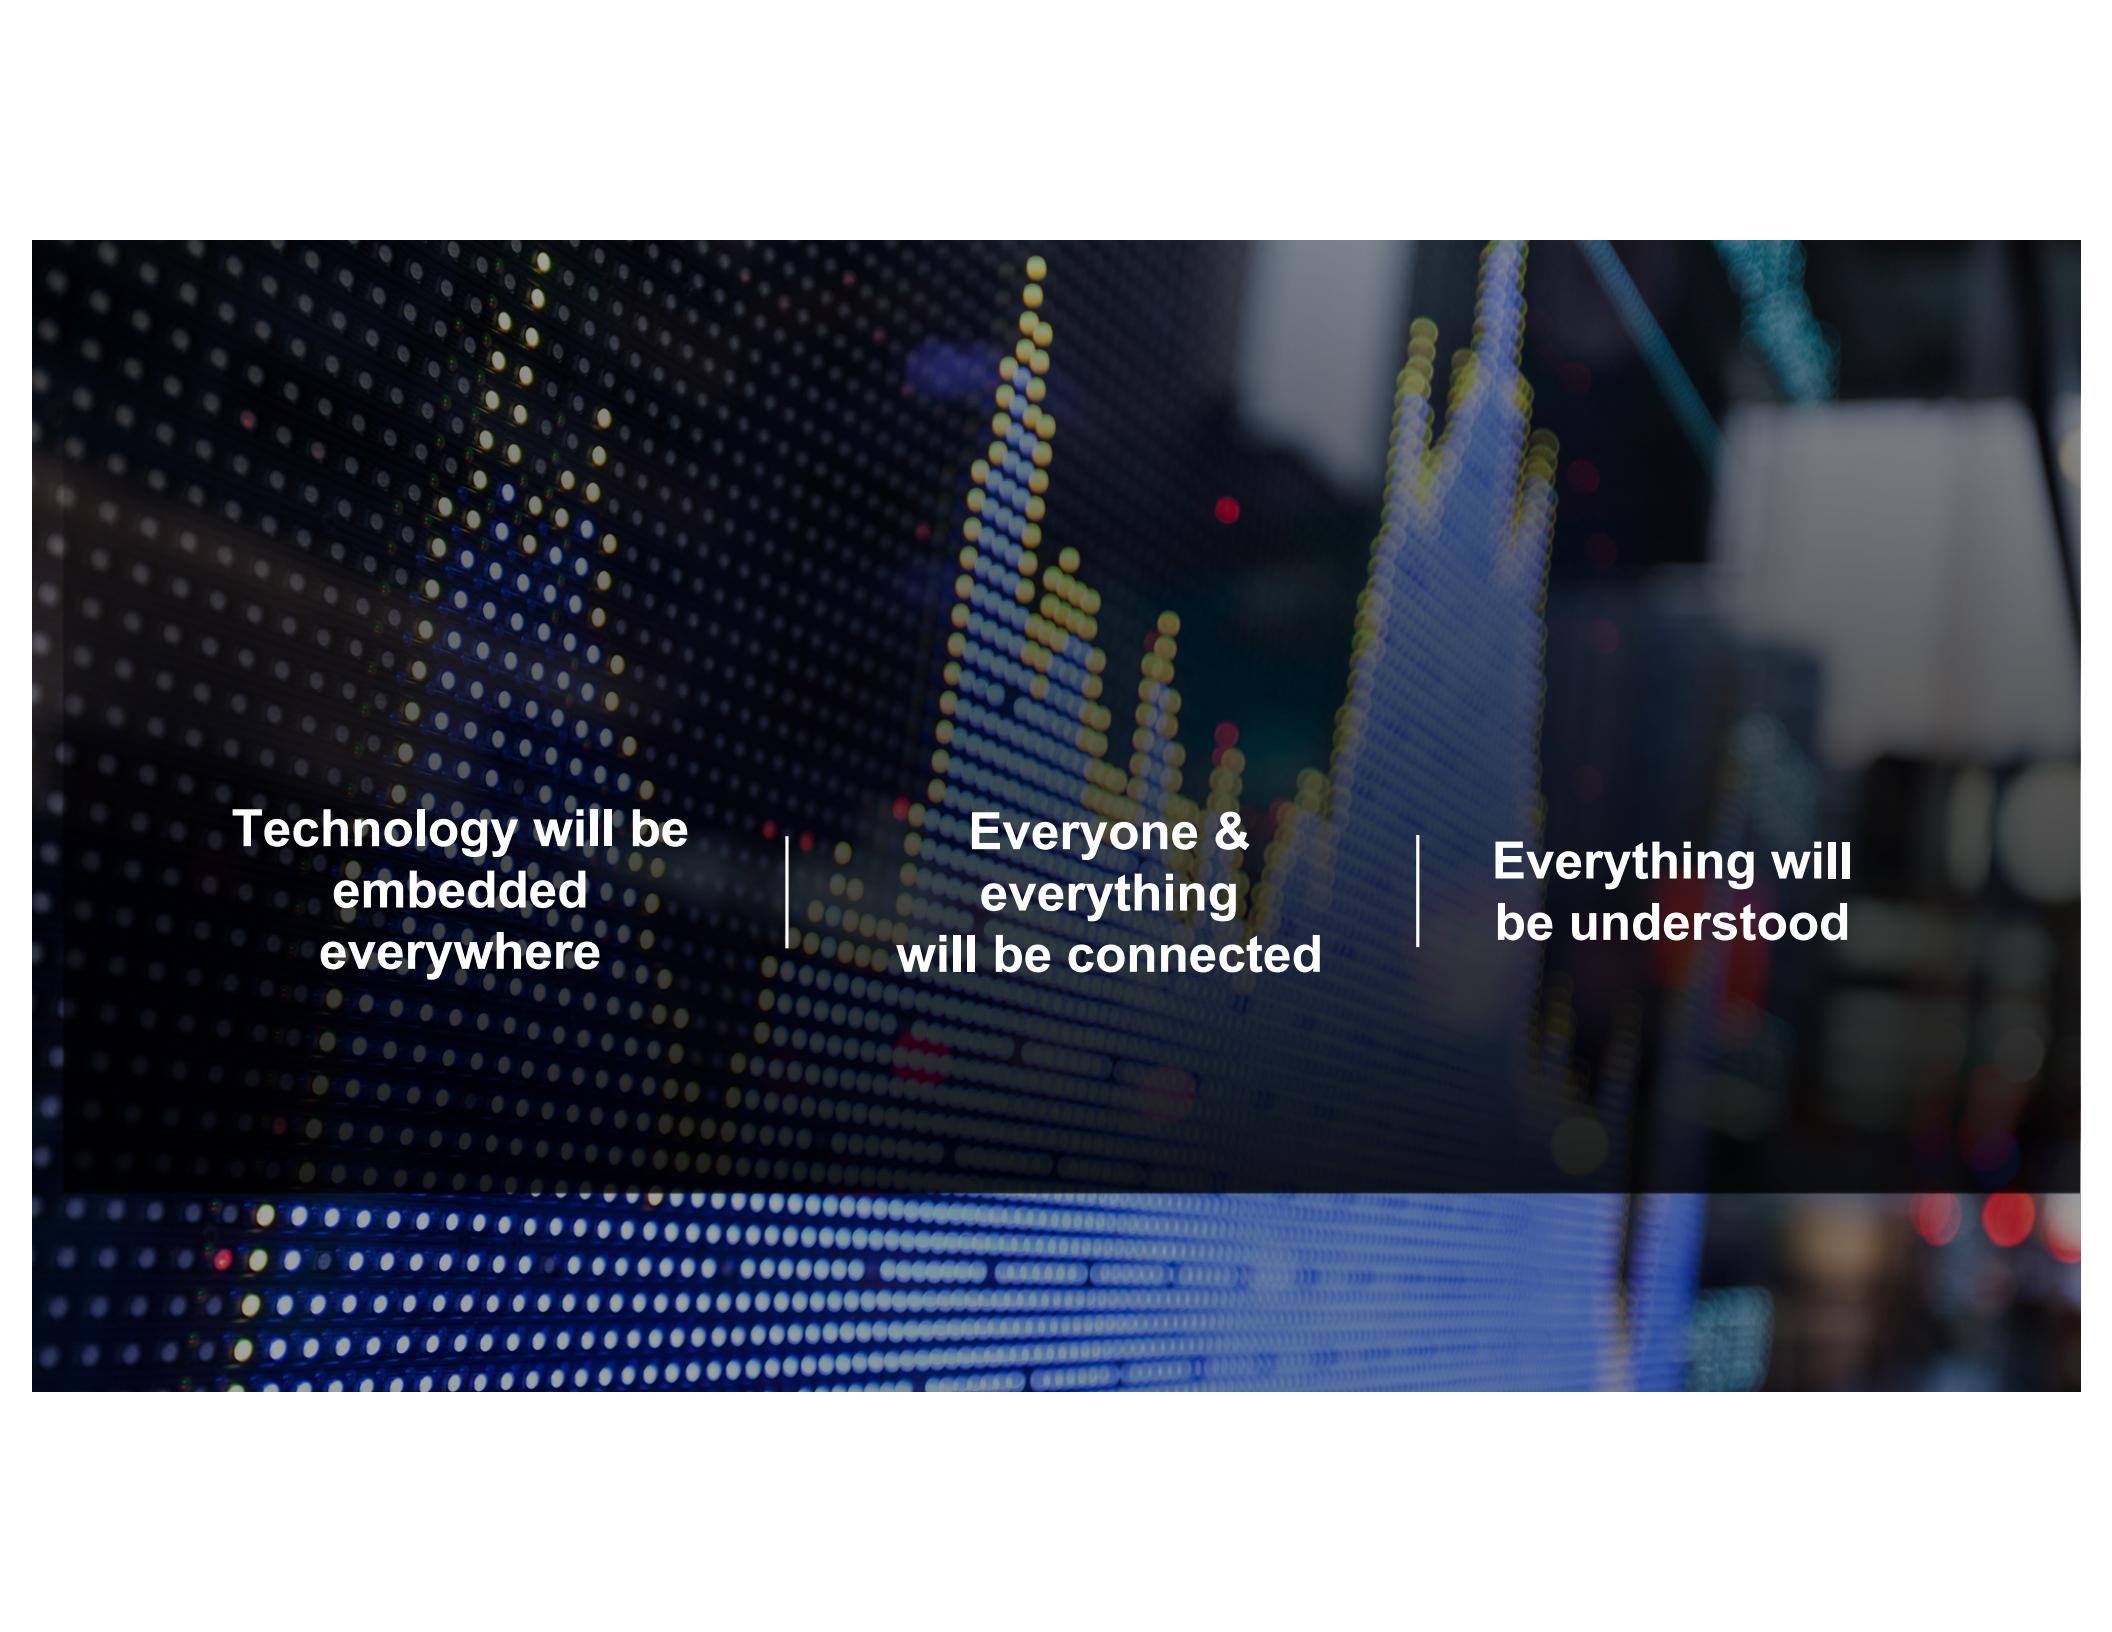

# Prepare for an expanding ecosystem

IDC predicts that the amount of data will reach  
**40** zettabytes by 2020, and more than **163** zettabytes a year by 2025.

Technology will be  
embedded  
everywhere

Everyone &  
everything  
will be connected

Everything will  
be understood

# Digital transformation is disrupting every industry

## Transformed

**Newspapers & magazines** → Digital media

**Books** → eBooks

**Music & video** → Downloads & streaming

**Retail** → Online shopping

**Travel** → Online travel agents and DIY

Hewlett Packard  
Enterprise

## Transforming

**Wellness & healthcare** → eDoctors

**Retail banking** → Online banking/apps

**Transportation** → Digital communication for 'smart' connected transport

**Government** → Closing the gap between the citizen and the state

## Soon to be transformed

**Manufacturing**

**Insurance**

**Utilities**

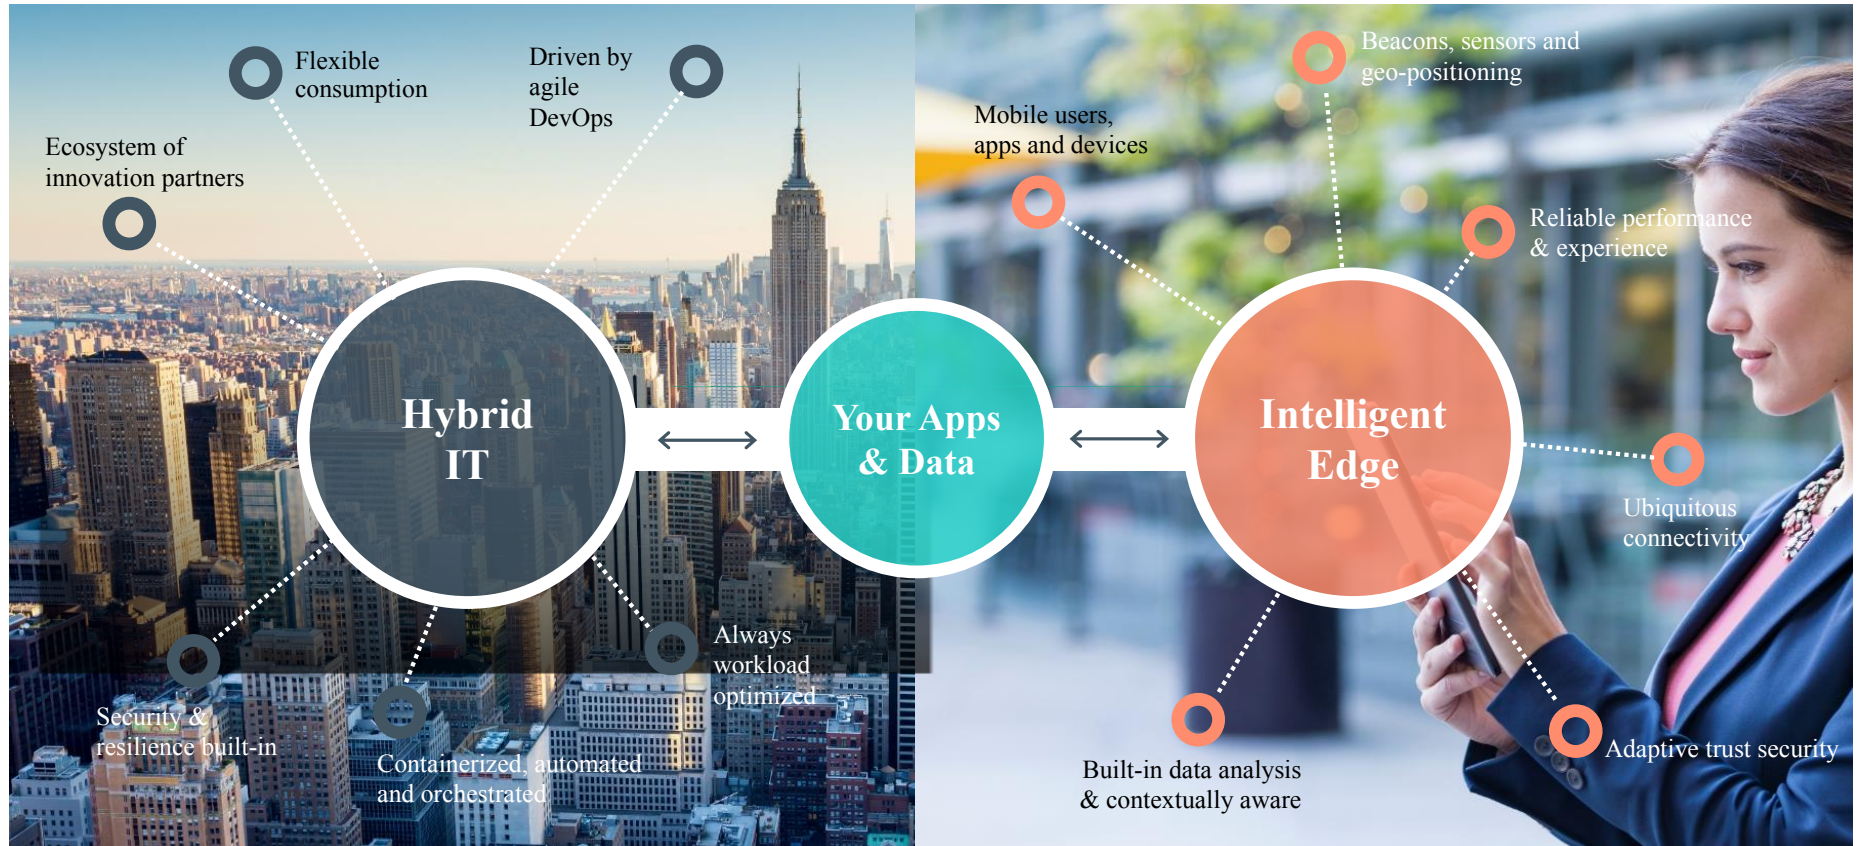

**Legal**

**Education**

**Construction**

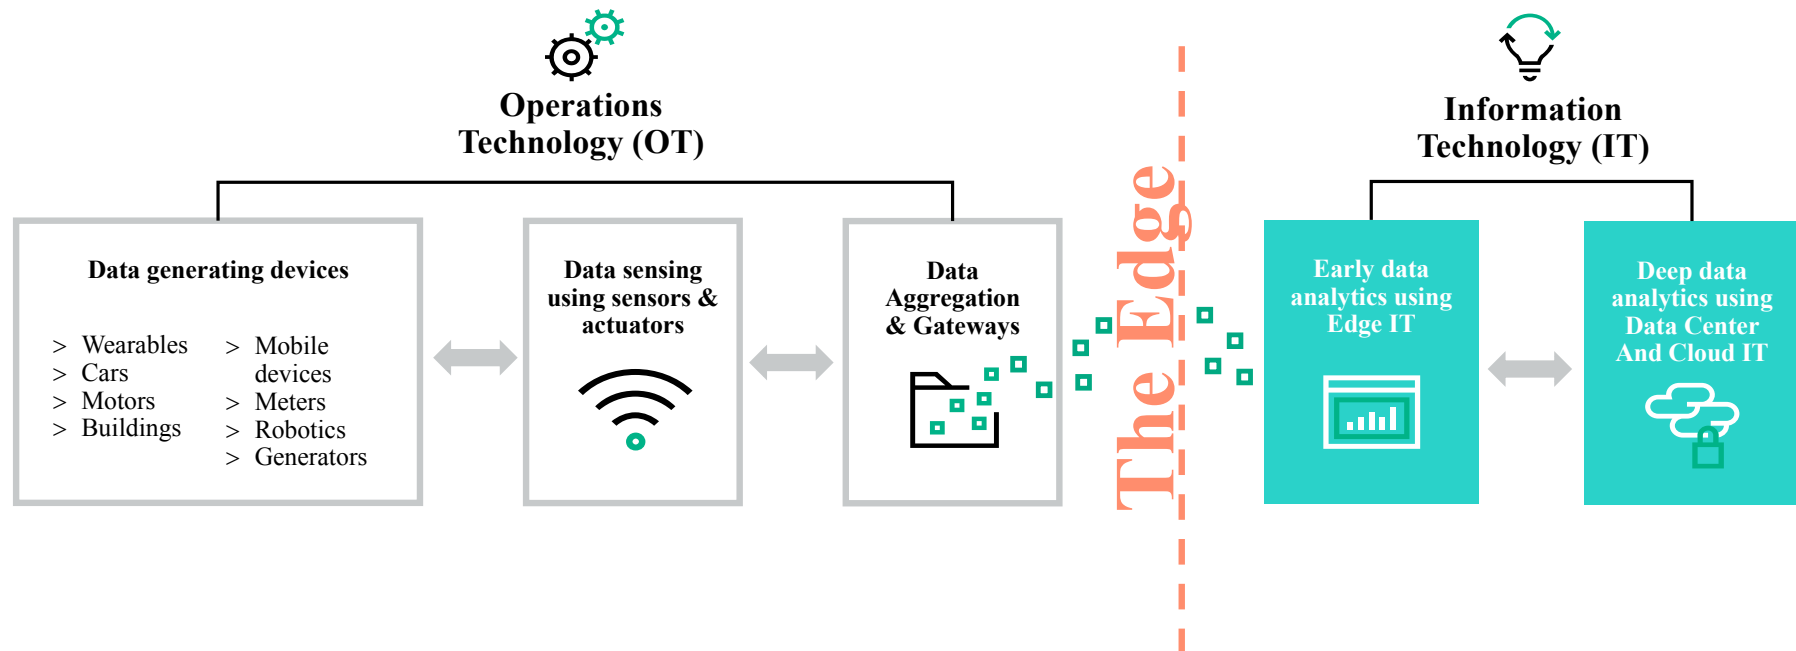

# Accelerating time to value is key to success in a hybrid world

# With more data presented at the Edge than ever before

Long-term data management and protection of digital assets is key

**>5.6** billion IoT devices owned by Enterprises and Governments will utilize edge computing for data collection and processing by 2020\*.

# Addressing market trends

Major market trends

Move Towards a  
Hybrid Cloud Model

Accelerated Flash  
Storage Growth

Increased Use for  
Server Based Storage

Support for Future  
Storage Technologies

## Flash

- > Flash continues to disrupt the storage market as cost of flash media continues to decline and capacity points increase
- > Entering third wave of disruption where All Flash is the “new normal” for mission critical workloads
- > All Flash Array (AFA) market generated over \$1.1BN in Q3’16

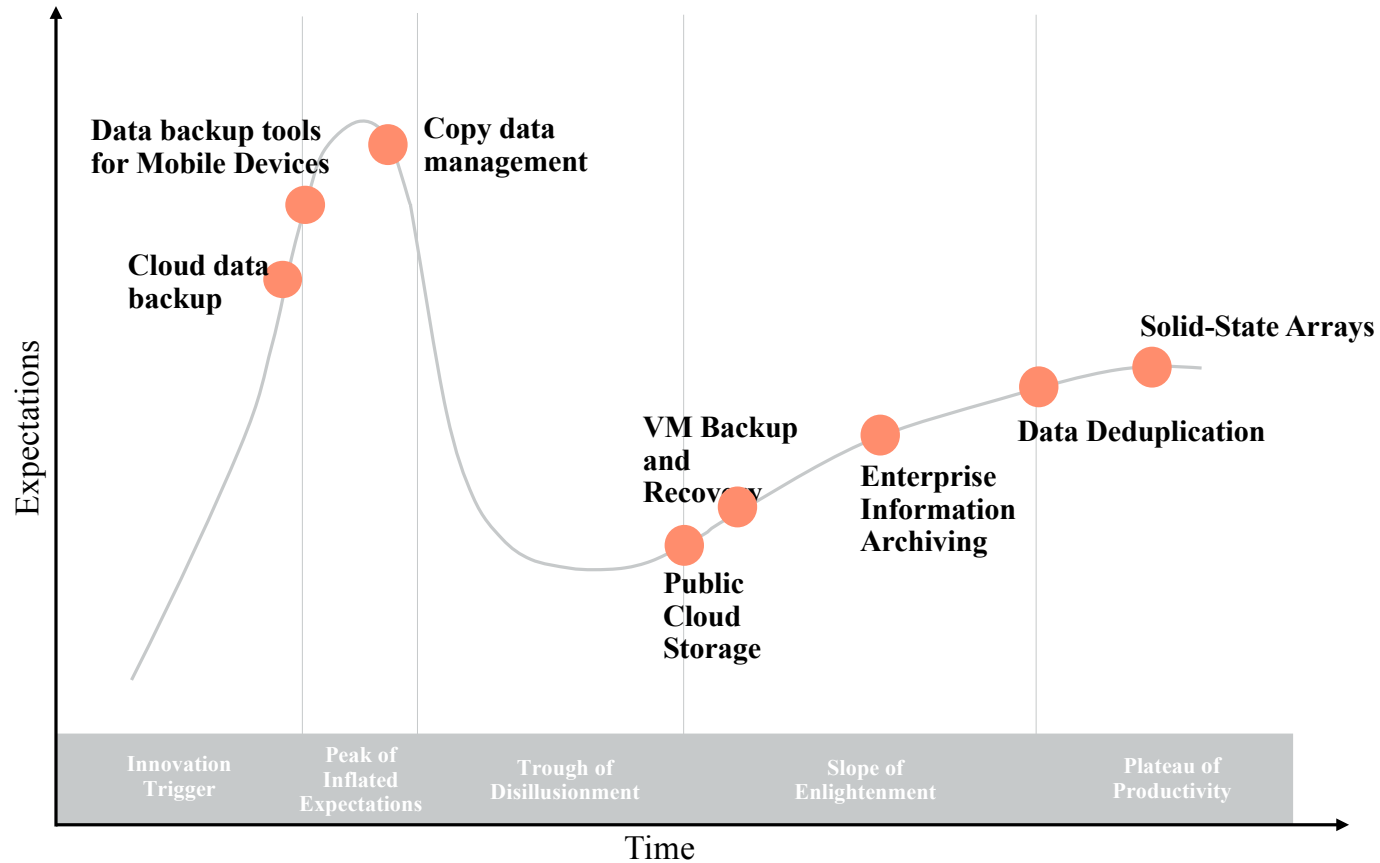

## Cloud

- > Public cloud storage continues to grow (but with some concerns)
- > Hybrid Cloud strategies become more popular to combat security, data sovereignty and bandwidth pricing issues
- > Increased popularity around pay-as-you-grow storage consumption models

## Object

- > Software Defined Storage (SDS) is becoming an integral part of big-data and HPC initiatives
- > Optimal data storage economics at scale with less footprint
- > Timeless flexibility today and for the future

# And so many forms of data protection to choose from

A night cityscape with a network overlay. The image shows a city at night with lights reflecting on the water. A network of blue lines and dots is overlaid on the city, suggesting a digital or data network. The text is centered in the upper half of the image.

**And in an evolving storage landscape  
what role does tape still have to play?**

# Intelligent Edge and Hybrid IT challenges

Transitioning to the Intelligent Edge and Hybrid IT comes with its own challenges

## Intelligent Edge challenges

- Provide **secure access** for users, devices and things
- **Manage demands** of remote and branch locations
- **Personalize customer engagement** for increased loyalty
- Harness **value of insights** generated from mobility and IoT

## Hybrid IT challenges

- Legacy data and IT requirements consume >60% of resources
- **Cumbersome** culture, tools and processes
- **Complex** industry requirements
- Annual fixed funding models and **shrinking budgets**
- **Security** and governance risk

Tape continues to provide the lowest-cost, most reliable, secure storage solution for long-term retention of digital assets at \$0.007 per GB\* for life

# Protect your Data and Applications with Enterprise Tape Technology

## Economic

Lowest cost storage at \$0.007 per GB for life<sup>[1]</sup>

## Efficient

Tape energy consumption <2% of equivalent storage using HDDs<sup>[2]</sup>

## Highly scalable

Current LTO-7 cartridge holds up to 15TB<sup>[3]</sup>.  
LTO-8 ~30TB.

## Secure

Offline and on-premises protection against ransomware

Tape's value proposition is still as relevant today  
as it has ever been

<sup>[1]</sup> Assumes 2.5:1 compression ratio for the life of the cartridge. Based on current audit of LTO-7 pricing (Mar'17) at \$115.55 per 15TB.

<sup>[2]</sup> State of the Tape Industry 2017

<sup>[3]</sup> 2.5:1 compression ratio

# New areas of growth for tape technology

## Digital video surveillance

- > In 2017, an estimated **127 million** video surveillance cameras will be sold<sup>[1]</sup>.
- > Factors driving worldwide demand include:
  - Increased awareness
  - Security climate
  - Legislation
  - Multiple use
  - Price decreases

## HPC & Big Data Analytics (HPDA)

- > Moving from static searches in databases to complex algorithms and analysis to discover hidden patterns, relationships and trends.
- > Offload cold storage from primary arrays to tape libraries for long-term retention.
- > High capacity tape libraries, with low power consumption ideal for supporting HPC environments over the long-term.

## Protection against Ransomware

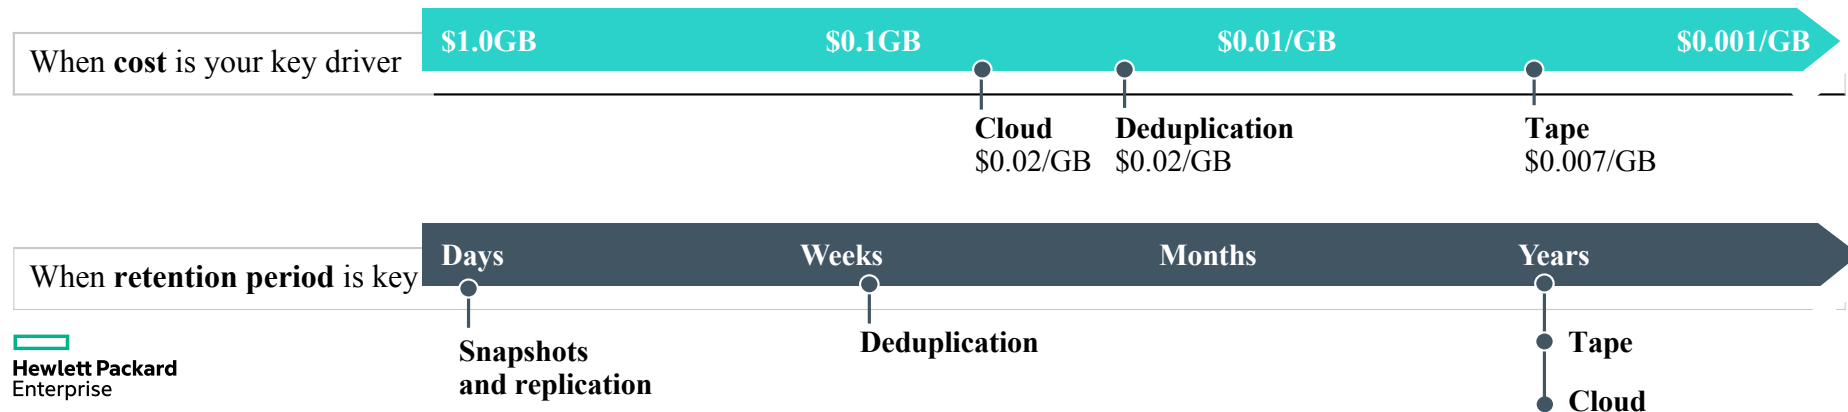

- > Cyberattacks can occur at any time – make sure your business is prepared!
- > 6 ways to fight back
  1. Data inventory
  2. Staff training
  3. Preparation
  4. Offline data (create an air-gap)
  5. Out of region data
  6. Backup and recovery

# Hot topic discussion: Tape vs. Cloud for long-term

TCO factors you should consider

Cost factors	Tape	Cloud storage
Raw storage capacity in a remote location	Relatively low-cost	Cost varies
On-premises backup infrastructure (SW/HW)	Costs can be significantly reduced when using tape	System costs and separate management processes are required
Off-site DR of backup data	Media transport, facility rental and media management	High bandwidth link
Long-term retention	Tape saves storage costs	Cloud storage, data transport and access or e-delivery
Admin and processes	More labor intensive and prone to human error	More automated and less labor intensive

# The future looks bright for tape storage

Developments for tape storage on the horizon

## Patent activity remains high

- > Higher performance
- > Reduced times to first byte of data
- > Increased reliability
- > Availability advancements

Dr. Mark Lantz with 330TB uncompressed data on new one square inch sputtered tape.  
(IBM Research)

## New use cases and innovative solutions

- > Active Archives
- > Storage tiering
- > Tape for Cloud and Internet Providers
- > Video surveillance and cybersecurity

## Tape roadmaps

- > LTO Program TPC identify LTO-10 generation on current roadmap
- > INSIC (2015-2025) International Magnetic Tape Storage Roadmap indicate the current areal density scaling rate will increase the cost advantage significantly between HDD's and tape systems.

**Hewlett Packard**  
Enterprise

# Thank You!

Any questions?
