Cloud Storage Decision Making – More than Cost per Capacity

Location (On/Off-Premise), Resiliency/Durable, PACE Attributes, Functionality, SLAs

Everything Is Not The Same, Why Treat Everything The Same?

Block, Blob/Page

File, Queue, Table, Object

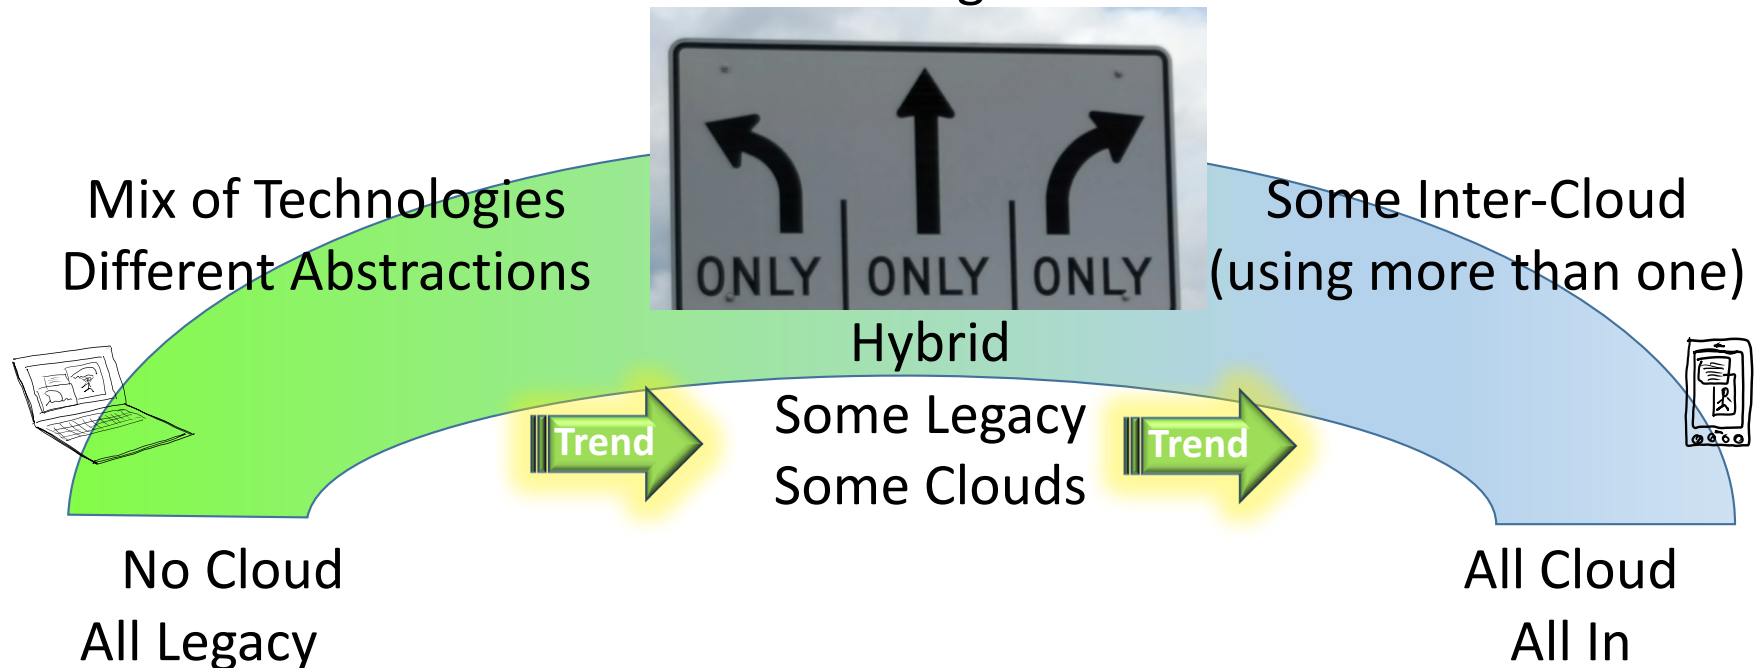

Object/Blobs

Everything Is Not The Same, Why Treat Everything The Same?

Have It Your Way To Meet Your Needs, Bridge Past, Present and Future

Cloud and Storage Decisions

Examples among others Alibaba, AWS, Azure, Backblaze, Box, Crashplan/Code42, Virtustream, Dropbox, Google, IBM Bluemix/Softlayer, Mega, Oracle, Rackspace, Yandex

Common Challenge = Sustained Growth Demands

How To Address Demands, Challenges and Mandates?

Legacy and Emerging
Application and Workloads

Data Growth Demand
Relative Forecast

Challenge

Constraints, Mandates
Security, Budgets

Licensed for use by Fujifilm. Any other use, copy or reproduction without StorageIO written permission is prohibited

Common Challenge = Technology Evolution Trend Options

How To Navigate and Leveraged Available Resources

Insight Awareness, Analytics
(Avoid Flying Blind)

On-prem
And Cloud

Physical Servers

Tape

Common Challenge = Enabling Growth Without Compromise

Address Challenges (Left), Leveraging Experience (Center), Balance Solutions (Right)

Legacy and Emerging
Application and Workloads

Data Growth Demand
Relative Forecast

Constraints, Mandates
Security, Budgets

Challenge

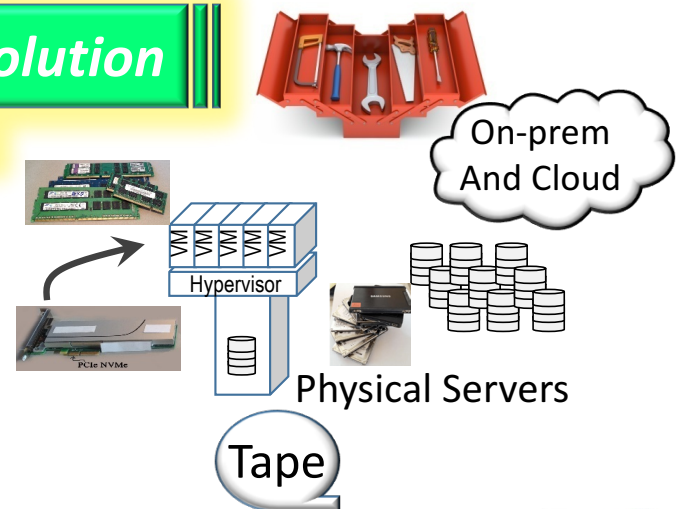

Tradecraft Skills
Tools, Technologies
Techniques, Best Practices
Policies

Insight Awareness, Analytics
(Avoid Flying Blind)

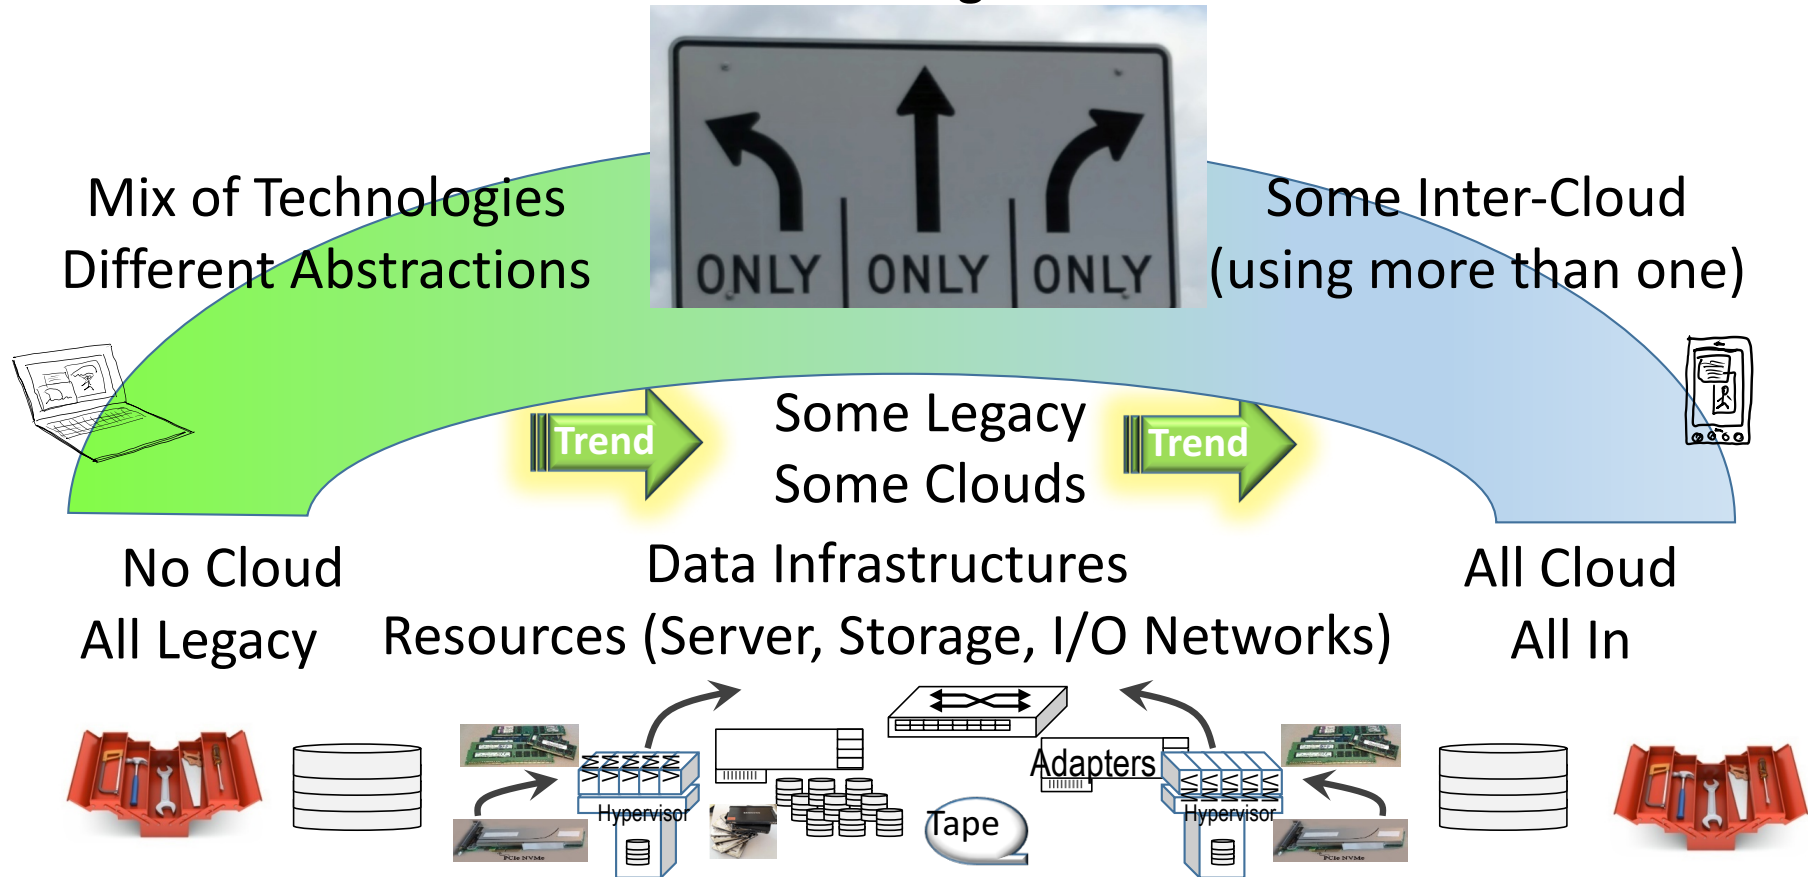

Solution

Everything Is Not The Same, Why Treat Everything The Same?

Have It Your Way To Meet Your Needs, Bridge Past, Present and Future

Cloud and Storage Decisions

What Is Your Cloud Objective?

How and Why Are You Using (or going to use) Clouds?

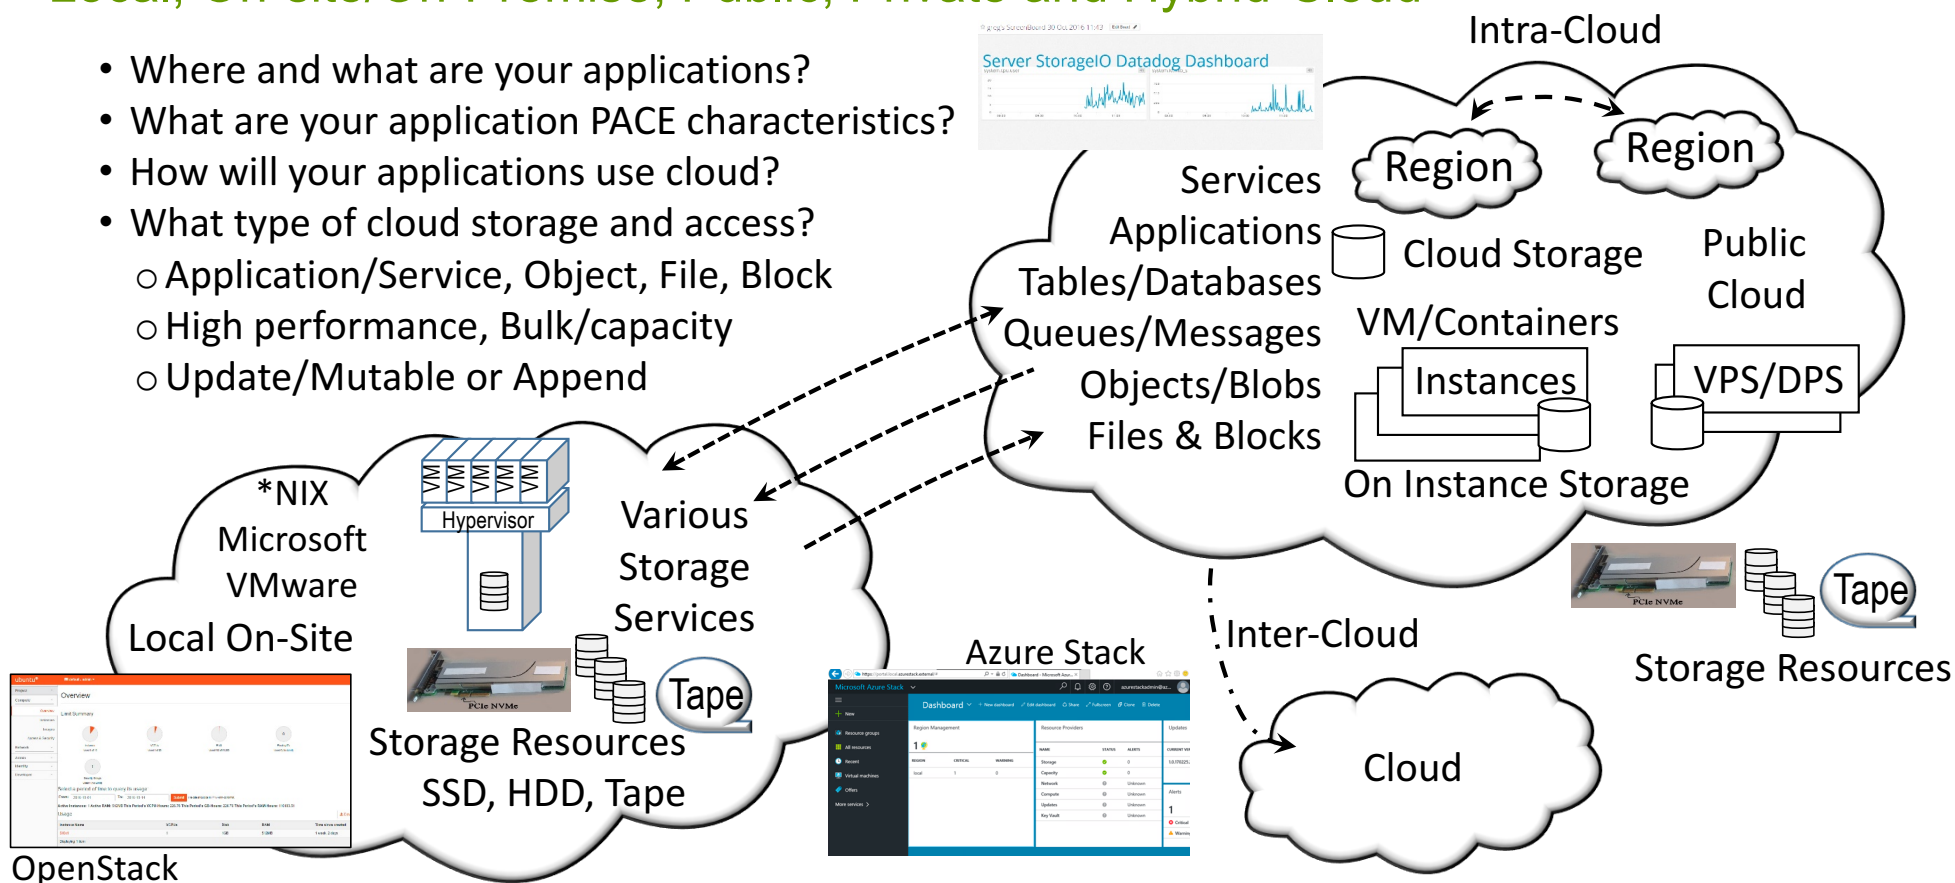

- To reduce, move, shift or hide costs?
- To improve scalability, remove complexity?
- For storage, networking, applications, compute, all of these?
- For IaaS, PaaS, SaaS, AaaS or Something else as a Service?
- As a destination for data protection (backup, archives, BC, DR)?
- As a peer site for resiliency, elasticity, bursting of workloads?
- As a place where applications run or can failover to?
- As a hub repository for various sites to collaborate?
- AS a place for logs, events, telemetry, messages?
- As a management plane for local and remote?
- As an authoritative copy for local cached data?
- Single Availability Zone (AZ), single region, multiple clouds?

Cloud Storage Decision Making – What Are Your Requirements?

Local, On-site/On-Premise, Public, Private and Hybrid-Cloud

- Where and what are your applications?
- What are your application PACE characteristics?
- How will your applications use cloud?
- What type of cloud storage and access?
 - Application/Service, Object, File, Block
 - High performance, Bulk/capacity
 - Update/Mutable or Append

PACE = Performance, Availability, Capacity, Economics

Cloud Storage Decision Making – More than Cost per Capacity

Location (On/Off-Premise), Resiliency/Durable, PACE Attributes, Functionality, SLAs

High Performance
Good Capacity
Efficient and Effective
Hot/Active
Geo-Resilient
Block, Blob/Page

Good Performance
Good Capacity
Cost Efficient
Warm/Active
Resilient
File, Queue, Table, Object

Some Performance
High Capacity
Very Cost Efficient
Warm, Cool, Frozen
Durable
Object/Blobs

Cloud Storage Does Not Have To Be All or Nothing, One Size Fits All!
Have it Your Way, When, Where, What, How Needed For Your Applications

- ✓ Mix of Services and functions
- ✓ Mix of PACE attributes
- ✓ Various media/mediums tiers
- ✓ (RAM, SSD, HDD, Tape)
- ✓ On-instance, non-instance

- ✓ Append or Update
- ✓ Support different use scenarios
- ✓ Avoid one size/approach fits all
- ✓ Mix of on-/off-premise
- ✓ Move beyond cost per capacity

Cloud Storage Decision Making – Access and Management

How Will You and Your Applications Manage As Well As Access Cloud Storage?

- CLI/GUI/UI/API
- HTTP/HTTPS, REST
- JSON, XML, S3, NFS
- SMB3, iSCSI, NBD
- FUSE, S3FS, POSIX
- Block, File, Object
- Table, Queues, Service
- Storage Application

The collage illustrates various aspects of cloud storage management:

- Azure Storage Explorer:** A GUI for managing Azure storage accounts, showing a hierarchy of storage accounts, containers, and files.
- Terminal Window:** A series of commands for setting up a local storage environment using `s3fs` and `rsync`. The commands include creating a local directory, mounting a remote storage bucket, and synchronizing files.
- Storage Buckets Table:** A table listing storage buckets and their contents, including file names, sizes, and last modified dates.
- Backup Software Interface:** A screenshot of a backup software interface showing a list of backup jobs and their status.

`sudo s3fs -o passwd_file=/home/greg/.passwd-s3fs -o use_sse -o nonempty -o use_cache=/tmp/cache sioubuntu /media/s3mnt`

Preparing For Our Wrap-up (landing) – What can you do today!

IT has been on a journey for decades, IT will continue to be on journeys for decades

Head in the clouds (vision, strategy), Feet on the ground (plan, implement, manage)

Head In the Clouds

- ✓ Don't be afraid, be prepared, do your homework
- ✓ Expand your tradecraft, skills, experiences
- ✓ Identify your concerns and questions
- ✓ Ask new and additional questions
- ✓ Talk with others today
- Understand your needs, know your options
- Establish metrics to compare and optimize SDx
- You need to know (have insight into)
 - Where you are going, what you have
 - When you are there, what is needed
 - Service management, how performing

- ✓ Learn the language and trends of SDx
- ✓ Plan what you need to take with, what to leave behind
- ✓ What resources (HW, SW, people, services) are needed
- ✓ What needs to be converted or adapted to the destination
- ✓ Reduce your footprint, travel light, bulk ship things if needed

Feet On The Ground

Closing comments, for now...

Know where you are going, why and what are your objectives

Expand your Data Infrastructure and Cloud Tradecraft Experiences

- Avoid flying blind, have insight and awareness
- Growth demands need multiple resource types
- Tape remains relevant, its location and use is changing
- Do not be scared of clouds, be prepared
- What can you do today:
 - ✓ Ask questions, identify new questions or concerns, then address them
 - ✓ Learn from mistakes of others, as well as from the past
 - ✓ Do a POC, gets some insight, awareness and experience, have some fun
